Gorilla Trades

GorillaTrades is an investment system that **actually works!** Time and time again, the GorillaTrades system has identified stock trades with explosive price appreciation potential.

Let's take the example to the left, **Skechers (SKX)**, which netted GorillaTrades subscribers a **+108% return** just last year! The GorillaTrades system identified precisely when to enter, and more importantly, **when to get out.**

Because the Gorilla constantly raises the second target, and more importantly, the stop loss as well, GorillaTrades subscribers were easily able to capitalize on this fast-running stock. In fact, systematically raising the stop loss each week from the initial point of \$18.65* to \$43.35*, helped GorillaTrades subscribers **to lock in a +108% profit in less than seven months!**

This is just one of many examples of how when used properly, the GorillaTrades system can help to ease the burden that falls on individual investors.

Don't get stuck holding the bag in this "jungle" of a stock market, see what GorillaTrades can do for you!

Gorilla  Trades

Silly Name. Serious Stock Picks!
